

TECNIS Synergy IOL

TECNIS Synergy IOL
Toric II

INDICATIONS AND IMPORTANT SAFETY INFORMATION FOR TECNIS SYNERGY™ AND TECNIS SYNERGY™ TORIC II IOL WITH TECNIS SIMPLICITY® DELIVERY SYSTEM, MODELS DF00V AND DFW

CAUTION: Federal law restricts this device to sale, distribution and use by or on the order of a physician.

INDICATIONS FOR USE: The TECNIS Simplicity® Delivery System is used to fold and assist in inserting the TECNIS Synergy™ IOL, which is indicated for primary implantation for the visual correction of aphakia in adult patients, with less than 1 diopter of pre-existing corneal astigmatism, in whom a cataractous lens has been removed. The TECNIS Simplicity® Delivery System is used to fold and assist in inserting the TECNIS Synergy™ Toric II IOLs, which are indicated for primary implantation for the visual correction of aphakia and for reduction of refractive astigmatism in adult patients, with greater than or equal to 1 diopter of preoperative corneal astigmatism, in whom a cataractous lens has been removed. Compared to an aspheric monofocal lens, the TECNIS Synergy™ IOLs mitigate the effects of presbyopia by providing improved visual acuity at intermediate and near distances to reduce eyeglass wear, while maintaining comparable distance visual acuity. The lens is intended for capsular bag placement only.

CONTRAINDICATIONS: None.

RISKS: Routine cataract surgery risk, irrespective of lens selection, could be minor, temporary, or affect patients' vision permanently. Rare complications are worsening of vision, bleeding, or infection. Risks related to use of this lens include halo or glare in nighttime or poor visibility conditions. These may be perceived as an annoyance or hindrance, which, on rare occasions, may be significant enough for the patient to request removal of the IOL. Patients should discuss all risks and benefits with their eye doctor before surgery.

PRECAUTIONS: Recent contact lens usage may affect the patient's refraction; therefore, in contact lens wearers, surgeons should establish corneal stability without contact lenses prior to determining IOL power. Prior to surgery, the surgeon must inform prospective patients of the possible risks and benefits associated with the use of this device and provide a copy of the patient information brochure to the patient. Patients with a predicted postoperative astigmatism greater than 1.0 D may not be suitable candidates for implantation with the TECNIS Synergy™ and TECNIS Synergy™ Toric IOLs, as they may not obtain the benefits of reduced spectacle wear or improved intermediate and near vision seen in patients with lower postoperative astigmatism. The safety and effectiveness of the TECNIS Synergy™ IOL have not been substantiated in patients under the age of 22 or those with preexisting ocular conditions and intraoperative complications.

WARNINGS: Physicians considering lens implantation should weigh the potential risk/benefit ratio. Well-informed patients with well-defined visual needs and preferences should be selected for lens implantation. Patients should be informed of the possibility of visual effects (such as halo or glare around lights), which may be expected in nighttime or poor visibility conditions.

About TECNIS Synergy™ and TECNIS Synergy™ Toric IOL: Physicians considering use of the TECNIS Synergy™ and TECNIS Synergy™ Toric IOLs should refer to the Directions for Use labeling for a complete list of indications and safety information.

See reverse for continued Indications and Important Safety Information.

Johnson & Johnson VISION

Presbyopia is a gradual, natural blurring of sight at close distances. It causes people to need to wear reading glasses.

But here's something you may not know: Cataract surgery can be a great opportunity to address your presbyopia along with your cataract.

With TECNIS Synergy™ IOLs, you have the opportunity to see the widest* range of continuous vision** with best near* day and night, while addressing your cataract (with or without astigmatism).¹⁻²

**Continuous 20/32 or better

YOUR LIFE ISN'T
LIVED AT ONE
DISTANCE.

A range of vision that's
as dynamic as your life.

From working on
computer screens to
reading in low-light, our
vision needs change from
moment to moment.
What if you could see
clearly from distance
to intermediate to near,
day and night?

PRESBYOPIA

Age

40

Typically becomes
noticeable around
the age of 40³

Makes it difficult to
focus on things up
close (near vision)

TECNIS Synergy™ IOLs offer the
widest* range of continuous vision**
day and night, so you can enjoy
the moments that matter most.¹⁻²
