

TECNIS®

Toric II 1-Piece IOL

ABOUT TECNIS® TORIC II IOL (Continued)

The TECNIS® Toric II 1-Piece posterior chamber lens is indicated for the visual correction of aphakia and pre-existing corneal astigmatism of one diopter or greater in adult patients with or without presbyopia in whom a cataractous lens has been removed by phacoemulsification and who desire improved uncorrected distance vision, reduction in residual refractive cylinder, and increased spectacle independence for distance vision. The device is intended to be placed in the capsular bag.

IMPORTANT SAFETY INFORMATION

The most frequently reported cumulative adverse event that occurred during the TECNIS® Toric 1-Piece IOL clinical trial was surgical re-intervention which occurred at a rate of 3.4% (lens repositioning procedures and retinal repair procedures). Rotation of these IOLs away from its intended axis can reduce its astigmatic correction. Misalignment greater than 30° may increase postoperative refractive cylinder. Variability in any of the preoperative measurements can influence patient outcomes. Physicians should weigh the potential risk/benefit ratio for circumstances described in the Directions for Use that could increase complications or impact patient outcomes. Federal law restricts this device to sale, distribution and use by or on the order of a physician.

About TECNIS® Toric II IOL: Physicians considering use of the TECNIS® Toric II IOLs should refer to the Directions for Use labeling for a complete list of indications and safety information.

See reverse for continued Indications and Important Safety Information.

Johnson & Johnson VISION

TRANSFORM YOUR VISION.

Astigmatism means: the shape of your eye is more oblong than circular, which prevents you from focusing properly. **Astigmatism may affect your ability to see crisp, clear vision. With the TECNIS® Toric II IOL for astigmatism, you can LIVE THE LIFE YOU WANT TO SEE.**

If you have both **astigmatism** and **cataracts**, you may have the opportunity to address them simultaneously with a toric IOL.

FIND YOUR FOCUS.

TECNIS®
Toric II 1-Piece IOL
Toric II

TECNIS® Toric II IOLs can correct your astigmatism, and help you focus on things that are far away.

Cataract surgery is trading one thing for another. When your cataract is removed, it is replaced by a small, soft lens called an *intraocular lens* — or *IOL* for short. You won't be able to feel or see the IOL, but it will stay inside your eye to help you see clearly.

Toric IOLs can address astigmatism as part of cataract surgery.

ASTIGMATISM

Distorts and blurs vision

Can lead to eye discomfort and headaches

Can be addressed with a toric IOL

Other solutions include prescription glasses and contacts made for astigmatism or an additional surgery

With Astigmatism

Without Astigmatism

40%

Nearly 40% of people with cataracts also require astigmatism correction¹.

When paired with a toric IOL, cataract surgery is a unique opportunity to address astigmatism, which typically occurs with other conditions.

If you have been diagnosed with astigmatism, talk to your doctor about which lens option from TECNIS® IOLs might be right for your life.
