**AcrySof® IQ Vivity™ Extended Vision Family of IOLs**  
**IMPORTANT PRODUCT INFORMATION**

**CAUTION:** Restricted by law to sale by or on the order of a physician.

**DESCRIPTION:** The AcrySof® IQ Vivity™ Extended Vision IOL is a type of IOL used to focus images clearly onto the back of your eye (retina) to allow clear vision after the cataract removal. The AcrySof® IQ Vivity™ Extended Vision IOL provides clear distance vision (e.g., for watching children playing in the backyard). In addition, the AcrySof® IQ Vivity™ Extended Vision IOL allows for better intermediate (working on a computer, applying makeup or shaving) and some near (reading, knitting) vision compared to what a monofocal IOL would provide. The AcrySof® IQ Vivity™ IOL is not a multifocal IOL, as it uses a new Wavefront-Shaping technology to provide the broader range of vision. There is a chance you may still need glasses for distance, intermediate, and/or near vision. You will get the full benefit of the AcrySof® IQ Vivity™ Extended Vision IOL when it is implanted in both eyes. Please discuss with your eye doctor whether this is the right IOL for you.

**POTENTIAL SIDE EFFECTS:** There are some side effects that can be associated with the design of IOLs that provide a broader range of vision, which may be worse than with a monofocal IOL. These side effects include visual disturbances such as glare, rings around lights, starbursts, and a decrease in ability to distinguish objects from their background, especially in dim lighting. These side effects may make it more difficult to see in some situations. Contrast sensitivity, an important measure of visual function, is the ability to distinguish objects from their background, especially in dim lighting. In the AcrySof® IQ Vivity™ IOL clinical study, contrast sensitivity in dim lighting was reduced in patients who received the AcrySof® IQ Vivity™ IOL compared to those who received the Monofocal IOL. A toric IOL corrects astigmatism only when it is placed in the correct position in the eye. Some patients may have some level of astigmatism remaining after IOL placement, especially if they had a lot of astigmatism before surgery. There is also a possibility that the toric IOL could be placed incorrectly or could move within the eye. As with any toric IOL that provides an extended range of vision, if the lens is not positioned correctly in your eye, or if the amount of astigmatism to be corrected is calculated incorrectly, you may experience poor vision, you may need to wear glasses to see clearly at all distances, or you may need additional surgery to reposition or replace the IOL.

**ATTENTION:** As with any surgery, there are risks involved. Prior to surgery, ask your eye doctor to provide you with the Patient Information Brochure for the proposed AcrySof® IQ Vivity™ Extended Vision IOL to be implanted. This document will further inform you of the risks and benefits associated with this IOL. Discuss any questions about possible risks and benefits with your eye doctor, as well as your medical condition and any eye disease you may have.

**A  
RENEWED  
LIFESTYLE**

Gain a brighter perspective. The **AcrySof® IQ Vivity™** Lens gives you a renewed outlook on life. In a clinical study, 106 patients were asked about their experience with the **AcrySof® IQ Vivity™** Lens:

**90%** were satisfied<sup>4,\*</sup> with their results and would get the lens again.<sup>4,†‡</sup>

**93%** would recommend the lens to a family member or friend compared to 84% for monofocal.<sup>4,§</sup>

\*In response to the question asked 6 months after surgery, "In the past 7 days, how satisfied were you with your vision?"

†Results from a prospective, randomized, parallel group, subject- and assessor-masked, multisite trial of 107 subjects bilaterally implanted with the AcrySof® IQ Vivity™ IOL and 113 with the AcrySof® IQ IOL with 6 months' follow-up.

‡In response to the question asked 6 months after surgery, "Given your vision today, if you had to do it all over, would you have the same lens implanted again?"

§In response to the question asked 6 months after surgery, "Given your vision today, would you recommend the lenses you had implanted to your family or friends?"

**CATARACT  
BASICS**

Cataracts form gradually as our eyes get older, and 9 in 10 Americans develop them by the time they're 65.<sup>2</sup> The good news is that cataract surgery is one of the safest, most common, and most effective procedures performed today.<sup>3</sup>

At the time of cataract surgery, you can opt for the **AcrySof® IQ Vivity™** Lens, which provides a greater range of vision than a standard monofocal lens.<sup>4</sup>

**THE PROCESS**

**1 CATARACT REMOVAL**  
Through a tiny incision, the surgeon removes your clouded lens.

**2 LENS INSERTION**  
The surgeon replaces your original lens with the **AcrySof® IQ Vivity™** Lens.

**3 VISION RENEWED**  
The **AcrySof® IQ Vivity™** Lens enhances your vision so you'll be free of cataracts.

**REDISCOVER  
CLARITY**

The way you use your vision shapes the way you live your life. The **AcrySof® IQ Vivity™** Lens shines a light on what's important in your every day.

In a clinical study, patients were asked about their experience 6 months after receiving the **AcrySof® IQ Vivity™** Lens:

**94%** reported good or very good vision far away without glasses in bright light.<sup>1,\*†</sup>

**92%** reported good or very good vision at arm's length without glasses in bright light.<sup>1,\*†</sup>

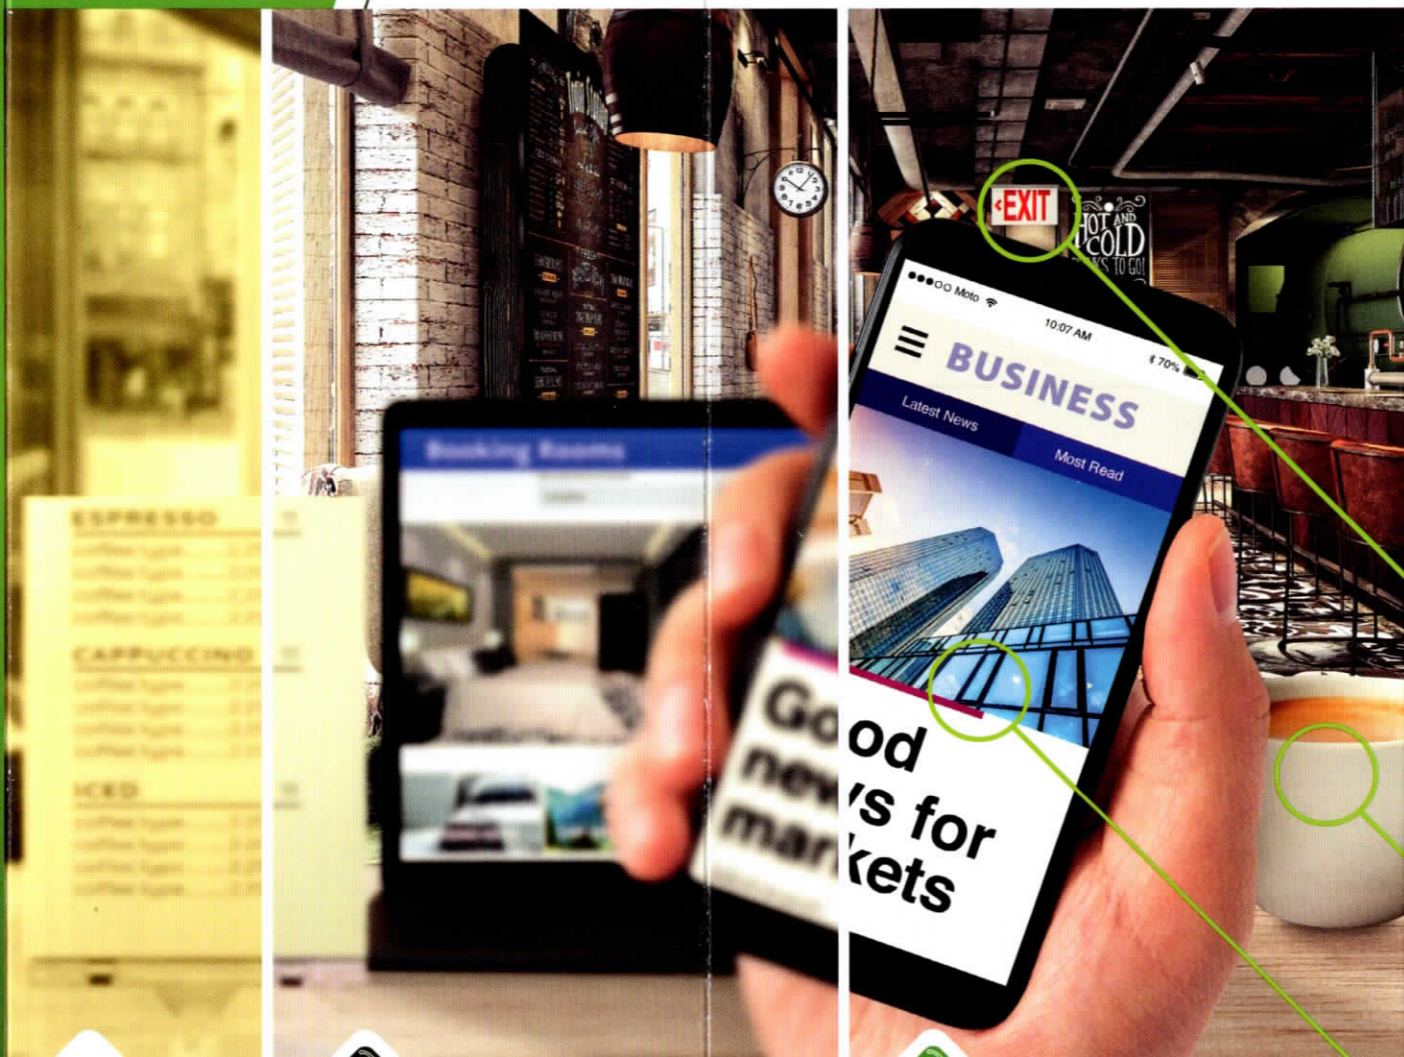

**Lightbulb icon** reported less bothersome glare.<sup>1,‡</sup>

\*Results from a prospective, randomized, parallel group, subject- and assessor-masked, multisite trial of 107 subjects bilaterally implanted with the AcrySof® IQ Vivity™ IOL and 113 with the AcrySof® IQ IOL with 6 months' follow-up. Patient-reported outcomes for spectacle independence were evaluated subjectively through IOLSAT questionnaire.

†Patients were asked, "How well did you see without wearing eyeglasses in the past 7 days?" Patients who reported not using glasses at least some of the time were asked to rate their quality of vision.

‡Assessed using QUID questionnaire.

**A LENS TO  
LIVE FOR MORE MOMENTS**

Choose a lens that revitalizes your lifestyle. The standard cataract replacement lens, which is also called a monofocal lens, allows you to see far away. The **AcrySof® IQ Vivity™** Lens allows you to see clearly far away and at arm's length while still providing functional vision up close.

**CLEAR VISION FAR AWAY**

- Go to a concert
- Spot a familiar face
- Drive a car
- Enjoy TV

**CLEAR VISION AT ARM'S LENGTH**

- Cook your favorite meal
- Send emails
- See the mirror

**FUNCTIONAL VISION UP CLOSE**

- Tend a garden
- Play games
- Take a picture
